STARON,
MAKE A SAFE PLACE FOR
KIDS

Staron, a gift of a healthy
environment where we can foster
our children's dreams

Staron solid surface can be easily adapted into a variety of classrooms.
From kindergarten to university facilities, we strive to produce clean and
hygienic spaces where the future dreams of our students can be realized.

A delicious dining space for our rapidly growing children

The dining space where our children eat their delicious meals every day must be a healthy and safe venue. It must also be a place that is clean, sanitary and easy to maintain for the facility management team. Unlike other finishing materials, Staron solid surface offers non-porous surfaces where it is impervious to moisture and resists bacterial growth and other contaminants from penetrating the surface. It is also stain resistant and cleans easily. Staron solid surface is often used for dining tables, buffet tables and various food serving counters. We take responsibility of the healthy lifestyle for your children.

Kids develop their creativity in their play areas.

Staron solid surface is a durable material that is impact resistant and can withstand heavy uage. Children can runaround and freely play without damaging the product. It is an ideal interior material for spaces where children are actively engaged in their movements and learning to be creative. Staron builds the creative spaces for your children.
